

Case Study

Architects

Project: Thomas Saunders Partnership
Client: Westminster Primary Healthcare Trust
Product: Deltastor shelving on Flexistor bases
Material Stored: Medical Records

Brief: To carry out, with the architect, a detailed assessment of the Trust's existing storage and, in discussion with all parties, to analyze their needs for a new, purpose-built HQ building.

This meant understanding any problems or difficulties with the existing environment and sourcing suitable storage systems to serve their future needs.

We designed several new flexistor mobile systems (matching the finishes to the décor and furnishings of the new building), as well as designing bespoke shelving for their post room along with library shelving for their reference library.

The project began as an initial requirement for mobile shelving and evolved to a single source for all their storage requirements.
